Parallel versions of a new multiple-choice word-recognition test were administered to 1019 and 590 Year 1 pupils respectively. The test format was based on a published test of Word Recognition and Phonic Skills and was intended to provide reliable diagnostic information. It was found that internally consistent measures of three types of ...

The administration of the word recognition test is a portion of the basic audiologic assessment that can have a significant impact on the time necessary to complete the assessment. One way to save time is to follow the approach mentioned in the previous section; that being the Hurley and Sells Auditec NU-6 Ordered by Difficulty list (Version II). The data from their 2003 study is strongly ...

If you have ever participated in a hearing test and have been asked to repeat single syllable words with prompts like "say the word love" or "say the word burn", then you've participated in a word recognition test. The purpose of this test is to measure, in terms of a percent, your optimal ability to process speech in a quiet setting. In addition to performing the test for each individual ear ...

Word recognition tests assess the person's ability to understand speech when presented at a loudness that is well above their threshold. It may be expected that a correlation exists between the type and degree of hearing loss and the word recognition score (WRS), but this depends on the cause of the hearing loss. For example, a person with a moderate conductive loss might score 88% on a word ...
