The IEEE 30 Bus Test Case represents a portion of the American Electric Power System (in the Midwestern US) as of December, 1961. The 11 kV and 1.0 kV base voltages are my guess. The model actually has these buses at either 132 or 33 kV. The 30 bus test case does not have line limits! The data was downloaded from the IEEE power systems test case archive at [1]. Single line diagram of the IEEE ...

The constant load profiles are the original data of the IEEE 39-bus system. The realistic load profiles are active and reactive components inferred by time series data, adapted from a monitoring system based on Phasor Measurement Units (PMUs) installed in the 125-kV grid of the city of Lausanne, Switzerland. The resolution of the time series is 20 milliseconds and the profiles are voltage and ...
