An engine control unit, also commonly called an engine control module, is a type of electronic control unit that controls a series of actuators on an internal combustion engine to ensure optimal engine performance. It does this by reading values from a multitude of sensors within the engine bay, interpreting the data using multidimensional performance maps, and adjusting the engine actuators. Before ECUs, air–fuel mixture, ignition timing, and idle speed were mechanically set and ...

The Engine Control Unit is a central part of the Engine Management System which is virtually the 'Brain' of an engine. It plays an important role in collecting, analyzing, processing, and executing the data it receives from various sub-systems. Furthermore, an ECU comprises a computer that uses a microchip to process the inputs from various engine sensors in real-time.
