It was during this event that the creation of the International Society on Laser Scanning (INSOLAS) was formally decided. This book is thus the first publication of this newly created society, in the wish that it will pave the way for future publications becoming a useful tool, as this one, for ophthalmologists around the world.

3D laser scanning emits millions of laser points. These points give an accurate point in space of whatever they reflected off. Laser scanning relies on line of sight, so with the latest scanners the skill is now within the methodology. This is to ensure the survey is complete and accurate.

Laserscanning (auch Laserabtastung) bezeichnet das zeilen- oder rasterartige Überstreichen von Oberflächen oder Körpern mit einem Laserstrahl, um diese zu vermessen, zu bearbeiten oder um ein Bild zu erzeugen. Sensoren, die den Laserstrahl entsprechend ablenken, heißen Laserscanner. Ein Laserscanner, der neben der Objektgeometrie zusätzlich die Intensität des reflektierten Signals erfasst ...

Laser scanning is the controlled deflection of laser beams, visible or invisible. Scanned laser beams are used in some 3-D printers, in rapid prototyping, in machines for material processing, in laser engraving machines, in ophthalmological laser systems for the treatment of presbyopia, in confocal microscopy, in laser printers, in laser shows, in Laser TV, and in barcode scanners

Scanning laser ophthalmoscopy (SLO) is a method of examination of the eye. It uses the technique of confocal laser scanning microscopy for diagnostic imaging of the retina or cornea of the human eye. As a method used to image the retina with a high degree of spatial sensitivity, it is helpful in the diagnosis of glaucoma, macular degeneration, and other retinal disorders.

[RIEGL - RIEGL Laser Measurement Systems](#)

3D Laser Scanning is a non-contact, non-destructive technology that digitally captures the shape of physical objects using a line of laser light. 3D laser scanners create "point clouds" of data from the surface of an object. In other words, 3D laser scanning is a way to capture a physical object's exact size and shape into the computer world as a digital 3-dimensional representation.
