We explain how multimedia metadata can be represented, attached to the content it describes, and benefits from the web that contains more and more formalized knowledge (the Web of linked data). We show how web applications can benefit from semantic metadata for creating, searching and presenting multimedia content.

Semantic metadata is metadata that describes the "meaning" of data. Of course, the very term "meaning of data" requires an explanation, if for no other reason than we've found that different individuals interpret it differently. We believe that there are two distinct applications of the term semantic metadata that are relevant here. The first applies to the meaning of data values, the ...

In order to achieve this, a semantic content understanding is necessary. The issues range from administrative metadata to describing the content and context of an image. The 'music use case' addresses the audio modality. It discusses a broad range of issues ranging from semantically describing the music assets (e.g. artists, tracks) over music events to browsing and consuming music on the ...
