The traditional approach to knee replacement requires a longer incision in the center of the knee and lacks the use of advanced surgical navigation such as robotics. "At UT Orthopedics," explains Dr. Freedhand, "our highly skilled and trained orthopedic surgeons have extensive experience and they can determine the best surgical option for each patient based on a personal evaluation."

Surgical strategies for knee joint preservation are numerous, with the procedure(s) of choice for a given patient dependent on the status of the articular cartilage, meniscus, overall alignment, and ligamentous stability. For patients with large, isolated, osteochondral defects of the articular cartilage of the femoral condyle, osteochondral allograft transplantation (OCA) is often performed ...
